Инструкции по установке и применению

ОПИСАНИЕ: Датчик движения сферической для наружной эксплуатации в открытых пространствах, но может также использоваться внутри помещений.

- ФУНКЦИИ И ХАРАКТЕРИСТИКИ:
• Зона обнаружения 12 м x угловой охват 120 градусов
• Лампы накаливания 100 Вт / 230 В
• Галогенные лампы 500 Вт / 230 В

ПРИНЦИП ДЕЙСТВИЯ: Датчик движения работает по принципу двупозиционного переключателя. СМОКР для автоматического включения выключения света.

- МОНТАЖНЫЕ ИНСТРУКЦИИ:
• Предупреждение: Во избежание возгорания, удара током или летящего исхода выключите источник электроэнергии в проводимой работе.

Paigaldus- ja kasutusjuhend

KIRJELDUS: Liikumisandur on väljas tootatud välisruumides kasutamiseks, kuid seda võib kasutada ka siseruumides.

- OMADUSED JA TEHNILISED ANDMED:
• 120° liikumisevõime 100° valgusvõimega
• 1000W valgusvõime
• 230 V valgusvõime / 230 V valgusvõime

TÖÖRÕHMOE: Liikumisandur on elektrooniline liit, mis liitub valgustatud automaatselt sisse ja välguks.

- KINNITAMISE JUHISED:
• HOIATUS! Tähtsaks! Elektrilõike või surma vältimiseks lülitage vool katkestatud võrgu juhtimiseks välja. Enne juhtimise paigaldamist teadke, kas elekter on välja lüüatud.

Uzstādīšanas un ekspluatācijas instrukcijas

APRAKSTS: Šis kustības sensors ir paredzēts ārpusējam lietošanai, taču to var lietot arī iekšā.

- ĪPAŠĪBAS UN SPECIFIKĀCIJAS:
• 120° uzdevi ir 120° kustības laukums
• 1000 W ietilpiskums
• 900 W halogēnlampas, 230 V
• 230 V halogēnlampas ar elektroniskiem transformatoriem

DARBĪBAS PRINCĪPI: Liikumisandur ir elektrooniskais liit, kas paredzēts kustības objekta apgaismošanai iekšējā un ārējā telpā.

- MONTĀŽES INSTRUKCIJAS:
• Brīdinājums: Lai izvairītos no adegšanās, kurus var izraisīt traumām, atslēdziet vai drošinātāju kārtā izslēdziet elektropretenti. Pirms vadoju pievienošanas pārbaudiet, vai ir izslēdzta enerģija.

Montavimo ir naudojimo nurodymai

PRAŠYMAS: Šis judesio jutiklis suprojektuotas naudoti lauke, tačiau j galima naudoti ir patalpose.

- SAVYBES IR DUOMENYS:
• 120° apimties 120° judesio laukas
• 1000 W galiosningumas
• 900 W halogeninės lempos, 230V
• 230 V halogeninės lempos su elektroniniais transformatoriais

VEIKIMO PRINCIPAS: Judesio jutiklis - tai elektroninis jungimo / išjungimo jungiklis, skirtas automatiškai įjungti apšvietimą.

- MONTAVIMO NURODYMAI:
• Įspėjimas: siekiant išvengti galimo elektrinio smūgio arba mirties, išjunkite maitinimą grandinėje prieš pradėdami arba po jo pabaigos išjungimo.

Praktiniai patarimai

- 1. Patikrinkite, ar įrenginys yra tinkamai įrengtas.
2. Patikrinkite, ar įrenginys yra tinkamai įrengtas.
